

Lotus Europa T/C and Special Chassis Closing Plate

Jon Lexau - August 9, 2001

drawing is not exactly to scale

formed from 17 ga stainless steel (original is probably 18 ga mild steel)

all holes (7) are 0.275" diameter (1/4" bolts)

it may be desirable to add a drain hole in the closing plate directly under the one in the front section of the body so that water does not collect on the plate
