IGNITION

IGNITION SYSTEM ........................................ IG-1
DISTRIBUTOR .............................................. IG-7
IGNITION SYSTEM
ON-VEHICLE INSPECTION

Spark Test
CHECK THAT SPARK OCCURS
(a) Disconnect the high-tension cord (from the ignition coil) from the distributor cap.
(b) Hold the end approx. 12.5 mm (0.50 in.) from the body ground.
(c) See if spark occurs while engine is being cranked.
NOTICE: To prevent gasoline from being injected from injectors during this test, crank the engine for no more than 5 – 10 seconds at time.
If the spark does not occur, perform the test as follows:

<table>

V00060
High-Tension Cords

1. **DISCONNECT HIGH-TENSION CORDS FROM SPARK PLUGS**
   (a) Remove the 6 screws and No.2 cylinder head cover.
   (b) Disconnect the high-tension cords at the rubber boot. Do not pull on the high-tension cords. 
   NOTICE: Pulling on or bending the cords may damage the conductor inside.

2. **DISCONNECT HIGH-TENSION CORD FROM IGNITION COIL**

3. **DISCONNECT HIGH-TENSION CORDS FROM DISTRIBUTOR CAP**
   (a) Using a screwdriver, lift up the lock claw and disconnect the holder from the distributor cap. 
   (b) Disconnect the high-tension cord at the grommet. DO NOT pull on the cords. 
   NOTICE: Pulling on or bending the cords may damage the conductor inside.

4. **INSPECT HIGH-TENSION CORD RESISTANCE**
   Using an ohmmeter, measure the resistance. 
   **Maximum resistance:** 
   - 25 kΩ per cord
   If the resistance is greater than maximum, check the terminals. If necessary, replace the high-tension cord.

5. **RECONNECT HIGH-TENSION CORDS TO DISTRIBUTOR CAP**
   (a) Connect the holder and grommet portion to the distributor cap as shown in the illustration.

**NOTICE:** Check that the holder is correctly installed to the grommet and distributor cap as shown in the illustration.
(b) Check that the lock claw of the holder is engaged by lightly pulling the holder.

6. RECONNECT HIGH–TENSION CORDS TO SPARK PLUGS
(a) Secure the high–tension cords with the clamps as shown in the illustration.
(b) Reinstall the No.2 cylinder head cover with 6 screws.

Spark Plugs
NOTICE:
- Never use a wire brush for cleaning.
- Never attempt to adjust the electrode gap on a used spark plug.
- Spark plugs should be replaced every 100,000 km (60,000 miles).

1. INSPECT ELECTRODE
Using a megger (insulation resistance meter), measure the insulation resistance.
Standard correct insulation resistance:
10 MΩ or more
If the resistance is less than specified, proceed to step 4.
HINT: If a megger is not available, the following simple method of inspection provides fairly accurate results.
Simple Method:
(a) Quickly race the engine to 4,000 rpm 5 times.
(b) Remove the spark plug. (See step 2)
(c) Visually check the spark plug.
   If the electrode is dry ... OK
   If the electrode is wet ... Proceed to step 3
(d) Reinstall the spark plug. (See step 6)
2. REMOVE SPARK PLUGS
Using a spark plug wrench, remove the 4 spark plugs.
3. VISUALLY INSPECT SPARK PLUGS
   Check the spark plug for thread damage and insulator damage.
   If abnormal, replace the spark plug.
   Recommended spark plug:
   - DENSO: PK20R11
   - NGK: BKR6EP-11

4. INSPECT ELECTRODE GAP
   Maximum electrode gap for used spark plug:
   - 1.3 mm (0.051 in.)
   If the gap is greater than maximum, replace the spark plug.
   Correct electrode gap for new spark plug:
   - 1.1 mm (0.043 in.)
   NOTICE: If adjusting the gap of a new spark plug, be sure only the base of the ground electrode. Do not touch the center electrode.
   Never attempt to adjust the gap on the used plug.

5. CLEAN SPARK PLUGS
   If the electrode has traces of wet carbon, allow it to dry and then clean with a spark plug cleaner.
   Air pressure:
   - Below 588 kPa (6 kgf/cm², 85 psi)
   Duration:
   - 20 seconds or less
   HINT: If there are traces of oil, remove it with gasoline before using the spark plug cleaner.

6. REINSTALL SPARK PLUGS
   Using a spark plug wrench, install the 4 spark plugs.
   Torque: 18 N·m (180 kgf-cm, 13 ft-lbf)

7. RECONNECT HIGH–TENSION CORDS TO SPARK PLUGS

Ignition Coil
   NOTICE: "Cold" and "Hot" in the following sentences refer to the temperature of the coils themselves. "Cold" is from -10°C (14°F) to 50°C (122°F) and "Hot" is from 50°C (122°F) to 100°C (212°F).
1. DISCONNECT IGNITION COIL CONNECTOR
2. DISCONNECT HIGH–TENSION CORD FROM IGNITION COIL
3. **INSPECT PRIMARY COIL RESISTANCE**
   Using an ohmmeter, measure the resistance between the positive (+) and negative (−) terminals.
   
   **Primary coil resistance:**
   - **Cold:** 0.36 – 0.55 Ω
   - **Hot:** 0.45 – 0.65 Ω
   
   If the resistance is not as specified, replace the ignition coil.

4. **INSPECT SECONDARY COIL RESISTANCE**
   Using an ohmmeter, measure the resistance between the positive (+) and high-tension terminals.
   
   **Secondary coil resistance:**
   - **Cold:** 9.0 – 15.4 kΩ
   - **Hot:** 11.4 – 18.1 kΩ
   
   If the resistance is not as specified, replace the ignition coil.

5. **RECONNECT HIGH-TENSION CORD TO IGNITION COIL**

6. **RECONNECT IGNITION COIL CONNECTOR**

   **Distributor**
   
   NOTICE: “Cold” and “Hot” in the following sentences express the temperature of the coils themselves. “Cold” is from −10°C (14°F) to 50°C (122°F) and “Hot” is from 50°C (122°F) to 100°C (212°F).

   **1. REMOVE DISTRIBUTOR CAP**
   Remove the 2 bolts, and disconnect the distributor cap from the distributor housing.

   **2. REMOVE ROTOR**

   **3. INSPECT AIR GAP**
   Using SST, measure the air gap between the signal rotor and pickup coil projection.
   
   SST 09240–00020
   
   **Air gap:**
   - 0.2 – 0.5 mm (0.008 – 0.020 in.)
   
   If the air gap is not as specified, replace the distributor housing assembly.

   **4. DISCONNECT DISTRIBUTOR CONNECTOR**

   **5. INSPECT SIGNAL GENERATOR (PICKUP COIL) RESISTANCE**
   Using an ohmmeter, measure the resistance between terminals.

IGNITION – IGNITION SYSTEM

If the resistance is not as specified, replace the distributor housing assembly.

6. RECONNECT DISTRIBUTOR CONNECTOR
7. REINSTALL ROTOR
8. REINSTALL DISTRIBUTOR CAP

Install a new packing and distributor cap with the 2 bolts

Igniter
(See spark test)
DISTRIBUTOR COMPONENTS

- Distributor Connector
- High-Tension Cord
- O-Ring
- Non-reusable part

- Rotor
- Distributor Housing Assembly
- Packing
- Distributor Cap
REMOVAL
1. DISCONNECT DISTRIBUTOR CONNECTOR
2. DISCONNECT HIGH-TENSION CORD FROM DISTRIBUTOR CAP
3. REMOVE DISTRIBUTOR
   (a) Remove the hold-down bolt, and pull out the distributor.
   (b) Remove the O-ring from the distributor housing.

DISASSEMBLY
1. REMOVE DISTRIBUTOR CAP
   Remove the 3 bolts, distributor cap and packing.
2. REMOVE ROTOR
   Remove the 2 screws and rotor.

INSPECTION
INSPECT SHAFT
Turn the shaft and check that it is not rough or worn. If it feels rough or worn, replace the distributor assembly.

REASSEMBLY
1. INSTALL ROTOR
   (a) Align the hollow of the signal rotor with the projection on the rotor.
   (b) Install the rotor with the 2 screws.

2. INSTALL DISTRIBUTOR CAP
   (a) Install a new packing to the distributor housing.
   (b) Install the distributor cap with the 3 bolts.
INSTALLATION

1. SET NO.1 CYLINDER TO TDC/COMPRESSION
   Turn the crankshaft clockwise, and position the slit of the intake camshaft as shown in the illustration.

2. INSTALL DISTRIBUTOR
   (a) Install a new O-ring to the housing.
   (b) Apply a light coat of engine oil on the O-ring.
   (c) Align the cutout of the coupling with the line of the housing.
   (d) Insert the distributor, aligning the center of the flange with that of bolt hole on the cylinder head.
   (e) Tighten the hold-down bolt.
       Torque: 23 N-m (230 kgf-cm, 17 ft-lbf)

3. CONNECT HIGH–TENSION CORDS TO SPARK PLUGS
   Firing order:
   \[1-3-4-2\]

4. CONNECT HIGH–TENSION CORD TO IGNITION COIL

5. CONNECT DISTRIBUTOR CONNECTOR
